

Project Executable Files

Date	9 July 2026
Team ID	Not Assigned
Project Name	OptiCrop: Smart Agricultural Production Optimization Engine
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	No
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	No
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not Deployed
Login Credentials (Demo)	Not Required
Platform / Hosting Provider	Localhost / (Optional: Render)
Repository Link	https://github.com/TayyibahShaik/OptiCrop_Agriculture.git
Demo Video Link	https://drive.google.com/file/d/12NvYFd0qDkJ4BxBELaGuavmV_1PzVHo/view?usp=drivesdk

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

- Install Python (version 3.8 or above)
- Install required libraries:
pip install -r requirements.txt
- Run the Flask application:
python app.py
- Open browser and go to:
<http://127.0.0.1:5000/>
- Enter soil and environmental inputs to get crop prediction

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	No real-time weather data integration	Can be added using Weather API
2	UI is basic and not fully responsive	Can be improved using React/Tailwind
3	Model accuracy depends on dataset quality	Can be improved with more data
